Education

Symbiosis University of Applied Sciences

Expected 2026

Bachelor of Technology in Computer and Information Sciences (CGPA: 8.9)

Shree Swaminarayan Gurukul, Vapi

2022

Class XII (CBSE - PCM: 70%), Class X (CBSE: 84%)

Experience

Software Developer Intern (Fintech)

Jan 2026 – Present

Multiplus, Mumbai (Hybrid)

- Developed core modules for Mitra (partner) system including referral workflows and client onboarding tracking.
- Built Referral RM (Relationship Manager) features to manage client allocation, tracking, and internal workflows.
- Designed and implemented a Goals Calculator module to assist users in financial planning and target-based projections.
- Worked on backend services and API design for scalable fintech platform features.
- Ensured modular architecture with clear separation between customer-facing and internal management systems.
- Collaborated on system design and feature implementation following production-grade development practices.

Software Developer Intern

June 2025 – July 2025

HKRP Innovation Limited, Ahmedabad

- Developed scalable backend modules using C# and .NET for enterprise applications.
- Integrated MySQL and MongoDB databases for efficient data storage and retrieval.
- Improved performance through optimized queries and backend logic enhancements.

Intern

June 2024 – July 2024

Infosys Springboard (Virtual)

- Built projects using Java, Python, and MongoDB.
- Gained exposure to Agile methodology, cybersecurity fundamentals, and data analytics.

Projects

Mitra Referral & RM Management System (Fintech)

- Designed and developed a referral-based partner (Mitra) system to onboard and manage client acquisition workflows.
- Implemented Referral RM (Relationship Manager) module for client allocation, tracking, and internal operations.
- Built scalable backend APIs to support multi-role interactions between partners, RMs, and internal systems.
- Focused on modular system design ensuring separation between customer-facing and internal management layers.

Financial Goals Calculator

- Developed a goal-based financial planning module to calculate investment targets and future projections.
- Designed logic for dynamic calculations based on user inputs like savings, tenure, and expected returns.
- Integrated the module within a larger fintech system for real-time user assistance and planning.

Indian Stock Market Data & Analytics API (FastAPI)

- Built a FastAPI backend providing NSE/BSE stock data with historical trends and technical indicators.
- Implemented portfolio and watchlist features with efficient data handling and API design.

Facial Recognition & Identity Verification API

- Developing a face recognition system using OpenCV and Dlib for identity verification workflows.
- Implemented face detection, embeddings, and matching logic for secure authentication.

Skills

Languages: Python, C#, SQL, JavaScript

Frameworks: FastAPI, ASP.NET, Angular, React, Bootstrap

Databases: MySQL, MongoDB

Tools: Git, VS Code, Visual Studio, IntelliJ, Postman, Cursor IDE

Concepts: REST APIs, JWT Authentication, RBAC, Clean Architecture, Data Analytics, Prompt Engineering
